Passport Number : Y3467307

PROFESSIONAL SUMMARY

BIM Modeler with 2 years of professional experience in architectural BIM modeling using Autodesk Revit. Experienced in project coordination, clash detection, sheet documentation and family creation. Demonstrated expertise in BIM Execution Plans (BEP), Level of Development (LOD) management, and Common Data Environment (CDE) workflows in alignment with ISO 19650. Developed custom automation tools using pyRevit to streamline repetitive workflows. Strong communication skills with experience attending coordination meetings and collaborating with multidisciplinary teams. Adept at collaborating with consultants, contractors, and stakeholders to support efficient BIM-based project delivery. Actively seeking opportunities within BIM-driven architectural teams where technical excellence and coordination are critical to project success.

KEY BIM SKILLS

- **Revit-Based Architectural Modelling & Documentation**, producing coordinated GA drawings, plans, sections, elevations, schedules directly from BIM models, while enforcing quality standards.
- **Development and Management of BIM Models** (existing-condition, proposed, and coordinated) in accordance with project-specific BIM Execution Plans (BEP), with QA/QC checks to maintain model accuracy and reliability.
- **Interdisciplinary BIM Coordination** with MEP teams, including clash detection, issue resolution, and proactive design coordination to prevent delays and cost overruns.
- **Preparation and Management of Project Submissions** such as RFIs, design clarifications, and coordinated submittals to ensure smooth communication across all stakeholders.
- **Project Clash Coordination** using Navisworks & QA/QC for the projects, including new-build and renovation works, ensuring design integrity and compliance at all stages.
- **BIM Workflow Automation** using PyRevit & Python Revit API, developing custom plugins to automate repetitive modeling and documentation tasks, enhancing model management efficiency and reducing coordination time.

PROFESSIONAL EXPERIENCE

BIM Modeler (Architectural/Structural) InfiniteoD Design and Engineering Private Limited.	Trichy, Tamil Nadu, India May 2024 - Present
--	---

- Developed and coordinated architectural and structural BIM models using Autodesk Revit in compliance with **BIM Execution Plans(BEP)**, project BIM standards, ISO 19650 guidelines, and client-specific requirements for commercial, residential, and fit-out projects.
- Delivered accurate BIM models across **LOD 100-400** ensuring consistency of geometry, information richness, and compliance with **LOD/LOI** requirements at each design and construction stage.
- Prepared comprehensive construction documentation including general **arrangement plans, sections, elevations, reflected ceiling plans, flooring plans, schedules, interior design drawings, millwork drawings and detailed technical drawings** directly from coordinated BIM models
- Developed **custom automation scripts using PyRevit** framework to automate repetitive tasks including sheet creation, view management, parameter updates, and quality verification processes.

- Coordinated architectural models with **Structural, MEP consultants**, resolving spatial and system conflicts through structured model reviews.
- Participated in **design and BIM coordination meetings**, implementing consultant and client feedback efficiently.
- Conducted **clash detection and model coordination using Navisworks**, supporting timely design resolution prior to construction.
- Ensured alignment between **architectural intent, interior design vision, and technical detailing**, particularly for high-end and luxury developments.
- Assisted in managing **RFI, technical queries, and design clarifications** related to architectural and interior scope.
- Maintained compliance with **project BIM standards, BEP requirements, and CDE protocols** throughout design and construction stages.

AUTOMATION & CUSTOM DEVELOPMENT

- **Developed Part Plan Generator** using filled region boundaries as automated crop regions with built-in template selector to rapidly create general arrangement, flooring, furniture, and specialty partial plans with custom naming conventions.
- **Created Annotation Transfer Tool** to copy and migrate room tags, spot elevations, flooring tags, and door tags across views with different scales, enabling efficient annotation replication for part plan documentation.
- **Built Room View Generator** to automatically create general arrangement, flooring, and ceiling plan views for individual rooms using room boundary geometry with customizable templates for room-specific sheet sets.
- **Designed Excel Parameter Updater** to batch synchronize element classification data including Uniclass codes, clash groups, and coordination priority values from spreadsheets to project models.

PROJECTS SUMMARY

- Design and Build for the Renovation of the Heritage Building of the Qatar Media Corporation, Qatar FM Building ,AM Building And QTV Building - **LOD 300**
- Commonwealth Bank of Australia, (CBA) - **LOD 400**
- The Red Sea, Saudi Arabia - **LOD 400**
- Aldar Manarat, Dubai - **LOD 350**
